

Asure Software's Resource Scheduler and SmartView Approved by FedRAMP

October 24, 2018

AUSTIN, Texas, Oct. 24, 2018 (GLOBE NEWSWIRE) -- [Asure Software, Inc.](#) (NASDAQ:[ASUR](#)), a leading provider of Human Capital Management (HCM) and workplace management software, today announced it is now authorized by Federal Risk and Authorization Management Program (FedRAMP) making Asure Software's solutions approved by meeting the rigorous security and privacy standards required by government agencies.

FedRAMP Authorization certifies that Asure Software has passed the rigorous security and risk management review process required to offer its Asure Software solutions, [Resource Scheduler](#) and [SmartView](#), to federal agencies, a mandate for any cloud service provider that serves the federal government. Asure Software customers that are using on-premise and legacy solutions, now have the added confidence knowing Asure is certified by FedRAMP when transitioning to our cloud-based offerings.

"FedRAMP authorization is not only significant to government agencies, but also to our current customers knowing that our solutions have been through this certification process and passed the most stringent cloud based data security," said Pat Goepel, CEO of Asure Software. "We are thrilled to be listed as authorized and will continue to bring solutions to organizations that help optimize office space for maximum productivity."

Federal agencies can now easily streamline internal operations with Asure Software solutions. Creating an increase in efficiency and driving productivity in today's dynamic, digital workplace. From desk-sharing initiatives and real estate optimization to floorplan design and service management, Asure Software solutions, [Resource Scheduler](#) and [SmartView](#), offer cutting-edge technology, integrated hardware and industry-leading expertise in implementation and change management.

FedRAMP is an official U.S. government program that simplifies the purchase of cloud technologies to government agencies. The White House Office of Management and Budget developed FedRAMP in early 2010 as a way to standardize the security vetting process for the shift to cloud-first initiatives. Prior to that, each agency had its own standards and guidelines which created difficult and long timelines for teams to get access to technology.

FedRAMP has streamlined the security controls as a way to measure a company's security and privacy posture against a common set of base guidelines. Whereas certifications like ISO27001 and SOC 2 are developed and assessed by private auditing firms, government officials developed FedRAMP using [NIST security controls](#) as the common baseline.
